Paper 1 AS Structured Questions

May/June 2017

1 hour 30 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Write your answers in the spaces provided on the Question Paper.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

1 (a) Fig. 1.1 shows some geological features of the sea floor.

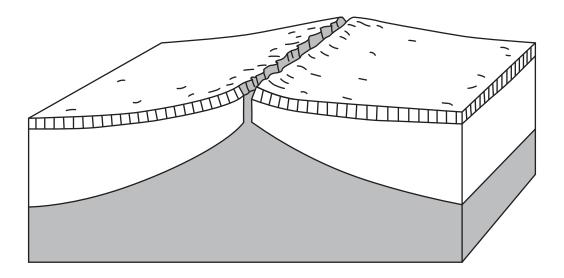

Fig. 1.1

- (i) On Fig. 1.1 use label lines to label the following structures:
 - a tectonic plate
 - magma
 - a mid-ocean ridge.

[3]

- (ii) Draw two arrows on Fig. 1.1 to show the direction in which the sea floor is moving. [1]
- (b) Table 1.1 lists three marine geological features.

Complete Table 1.1 by naming the type of tectonic plate boundary at which each feature is formed.

Table 1.1

geological feature	type of plate boundary
ocean trench	
volcano	
hydrothermal vents	

[2]

(c)	Ехр	lain how tectonic processes lead to the formation of each of the following.
	(i)	a tsunami
		[4]
	(ii)	an underwater volcano
		[4]
		[Total: 14]

2 (a) Fig. 2.1 shows some green algae which are found in the tissues of many species of coral. These algae have a mutualistic relationship with the coral.

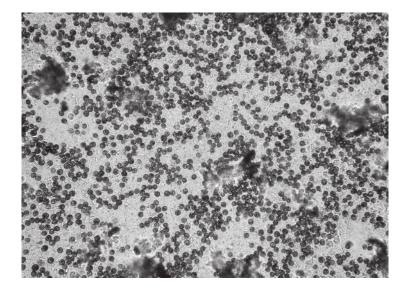

Fig. 2.1

.,	Name this type of alga.
	[1]
(11)	Describe the mutualistic relationship between these algae and the coral.
	[3]

(b)	Explain why corals co	ntaining algae gro	w best in shallow	water with little or no sec	diment.
(c)	Coral reefs are threate	-		regions.	[3
		Tal	ble 2.1		
	region	total reef area /km²	percentage of reef area threatened in 2011	estimated percentage of reef area threatened in 2030	
	Atlantic	25849	75	90	-
	Australia	42315	14	90	
	South East Asia	69 637	94	99	
	(i) Describe the data	a shown in Table 2			
	(ii) Outline the possil	ble effects of a dec		a on human coastal com	[2] munities.

[Total: 11]

.....[2]

3	(a)	State what is meant by the term <i>salinity</i> .	
			-

(b) Fig. 3.1 shows the relationship between temperature, salinity and density of seawater.

Salinity is measured in parts per thousand, %. The figures shown on the lines show the density in g cm⁻³.

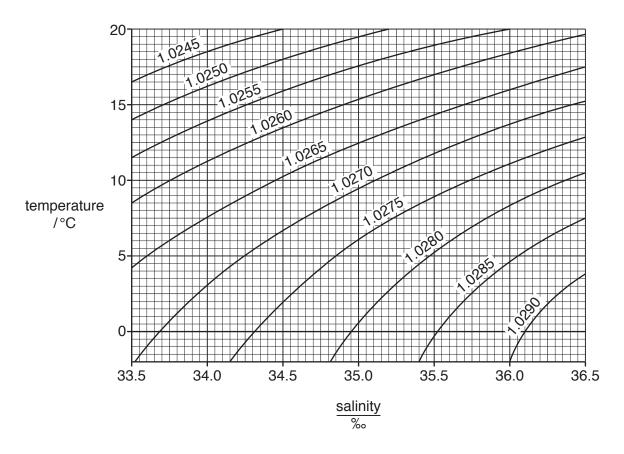

Fig. 3.1

(i) Use Fig. 3.1 to find the density of seawater at a temperature of 17 °C and a salinity of 35.5 %. Include the unit.

[2]

	(ii)	Use Fig. 3.1 to describe the relationship between:	
		temperature and density	
		salinity and density.	
			[2]
(c)	_	te two factors, other than temperature, that would cause the salinity of seawater ease.	r to
	1		
	2		
			[2]

[Total: 8]

4 (a) Fig. 4.1 represents a tide cycle for an area which has two high tides and two low tides each day.

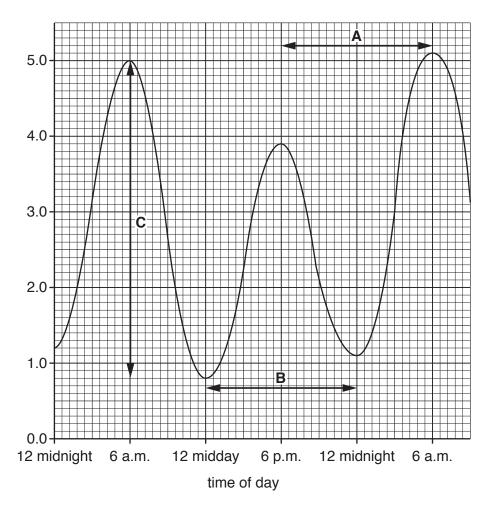

Fig. 4.1

(i)	State the label and units that should be shown on the <i>y</i> -axis.
	[2]
(ii)	State the length of time between each low tide.
	hours [1]
(iii)	State which line, A, B or C, represents the tidal range.
	[1]
(iv)	On Fig. 4.1, sketch a line to show the effect of an increase in air pressure on the tidal

[2]

© UCLES 2017 9693/01/M/J/17

cycle.

(b)	Explain how the alignment of the Moon and Sun affect the tidal range.
	[3]
	[Total: 9]

5 Fig. 5.1 shows part of a kelp forest.

Fig. 5.1

Kelp are large brown seaweeds that live attached to the rocky sea bed.

Kelp forests occur at and below low tide level in cold, nutrient-rich water. The kelp grow together in large numbers to form dense, underwater forests which reach from the sea bed to the surface.

Fig. 5.2 shows a part of a food web in a kelp forest.

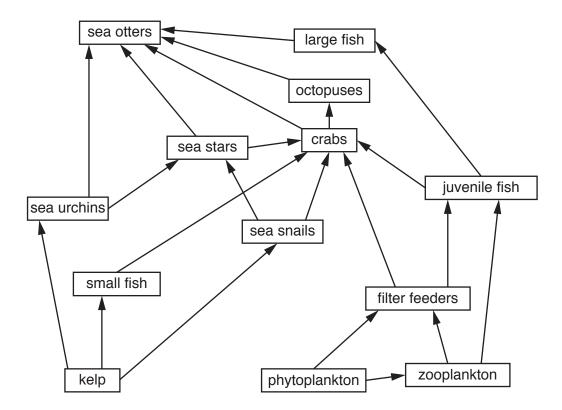

Fig. 5.2

(a)	In some parts of the world large areas of kelp forest are harvested by humans.
	Suggest and explain how this could affect the population of crabs.
	[3
(b)	Sketch a pyramid of energy for the following food chain.
ŀ	sea snails crabs octopuses sea otters

(c) Fig. 5.3 shows a food chain and the energy, in arbitrary units (a.u.), present at each trophic level.

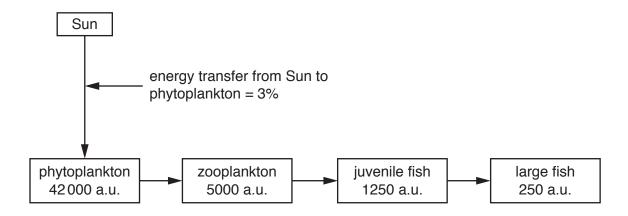

Fig. 5.3

(i) Of the light energy from the Sun that falls onto the water, only 3% becomes incorporated into the phytoplankton.

Suggest three reasons why only 3% of the energy is incorporated into the phytoplankton.

1	
2	
3	
	[3]

(ii) The efficiency of energy transfer between trophic levels is calculated using the equation:

efficiency =
$$\frac{\text{energy available after the transfer}}{\text{energy available before the transfer}} \times 100$$

Calculate the efficiency of the energy transfer between the zooplankton and the juvenile fish.

Show your working.

.....%

[1]

(d)	Suggest how upwelling could increase the productivity of the food web in Fig. 5.2.
	[4]
	[Total: 13]

6	(a)	State one biologica	l use for	each of the	following	nutrients

(i)	nitrogen	
	carbon	
	phosphorus	
	magnesium	

(b) Fig. 6.1 shows part of the calcium cycle in marine systems.

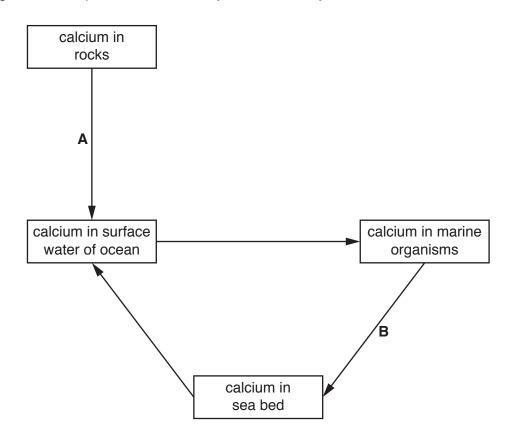

Fig. 6.1

i)	Describe process A shown in Fig. 6.1.
	[2

(II)	Describe process B snown in Fig. 6.1.	
		[2]
(iii)	Suggest how overharvesting of marine organisms could affect the calcium cycle.	
		[2]
	[To	tal: 10

7	(a)	Coral-eating	butterfly	fish	occupy	а	specialised	ecological	niche.	Tuna	occupy	а	general
		ecological nic	che.										

Define the term ecological niche.

.....[1]

The population sizes of a marine predator and a marine prey species were monitored over time. Both species occupy a specialised ecological niche.

Fig. 7.1 shows the relationship between the population sizes of the predator and prey species.

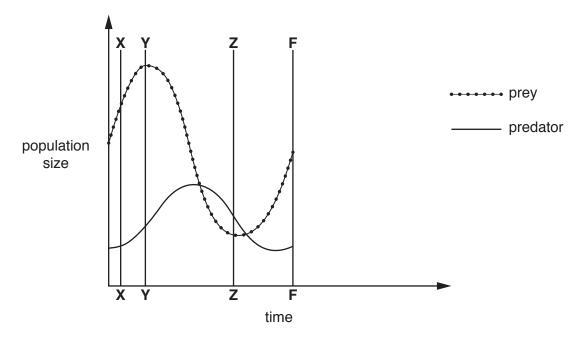

Fig. 7.1

(b) With reference to Fig. 7.1, describe **and** explain what is happening to the population of the predator species:

(i)	between time X and time Y
	[2]
(ii)	between time Y and time Z.
	[2]

(c) At time **F** in Fig. 7.1 a second predator species was introduced.

Sketch on Fig. 7.1 the predicted population sizes for the original predator and prey from time **F** onwards. [2]

(d) A sample of the prey species population was removed and introduced to a new habitat.

Fig. 7.2 shows the population growth curve for this species in its new habitat.

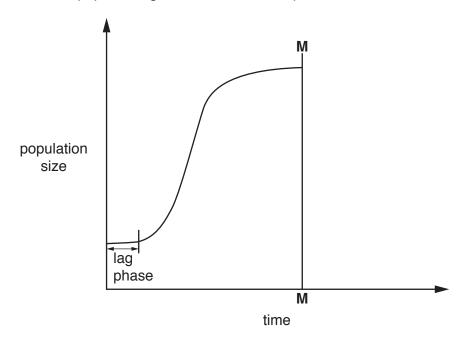

Fig. 7.2

(i)	Suggest why there is a lag phase in the population growth curve of the prey shown in Fig. 7.2.
	[1]
(ii)	At time \mathbf{M} , a toxin was accidentally introduced into the habitat.
	Sketch on Fig. 7.2 the predicted population growth curve from time M . [1]
(iii)	Suggest one factor, other than predators and toxins, that could affect the population of the prey species.
	[1]
	[Total: 10]
