UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS

International General Certificate of Secondary Education

MARK SCHEME for the May/June 2011 question paper for the guidance of teachers

0648 FOOD AND NUTRITION

0648/01

Paper 1 (Theory), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• Cambridge will not enter into discussions or correspondence in connection with these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2011 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

[Section A Total: 40]

Page 4	Mark Scheme: Teachers' version	Syllabus	Paper
	IGCSE – May/June 2011	0648	01

Section B

5 (a) Shortcrust pastry method with reasons

sift flour to aerate - to remove lumps

rub in fat fingertips - coolest part of hand - hands raised

to trap air

should look like breadcrumbs

add cold water avoid melting fat

mix with a round-bladed knife keeps everything cool — stiff dough firm dough — to avoid pressing out air allow fat to harden — cool trapped air

allows gluten to relax – easier to roll

12 points 2 points = 1 mark [6]

(b) Rules for rolling pastry

Do not turn pastry over. Roll in one direction.

Do not use too much flour for dredging.

Use short, forward strokes.

Avoid pressing down on the pastry.

Do not stretch the pastry. Lift pastry on rolling pin to turn.

4 points 2 points = 1 mark [2]

(c) Dishes using shortcrust pastry

fruit pies, meat pies, Cornish pasties, quiches, jam tarts, curry puffs etc 4 points (without repetition e.g. only 1 fruit pie)

2 points = 1 mark [2]

(d) Choice of flour and fat

plain flour air is raising agent contains baking powder

air is raising agent in shortcrust pastry

wholemeal/brown flour adds fibre - fat - colour - flavour

vitamin B - calcium

margarine for colour - flavour butter for colour - flavour

lard good shortness – lacks flavour – and colour mixture of lard and margarine combines shortening power with colour and flavour

10 points (names of ingredients or qualities)

2 points = 1 mark [5]

Page 5	Mark Scheme: Teachers' version	Syllabus	Paper
	IGCSE – May/June 2011	0648	01

6 (a) (i) Saving money

buy foods in season cheaper - better quality - good quality food -

to last until needed - prevents waste

buy in bulk economies of scale

may be wasted - may not have suitable storage do not buy too much at once

grow own fruit and vegetables cost of seeds only reduce use of ready-prepared food/ no added labour costs

convenience foods use cheaper protein food cheap cuts of meat – use eggs, milk and cheese

use pulses mix with other LBV protein to give HBV

only cook the amount required saves waste

have a shopping list reduces impulse buys use left-overs to prevent waste look for special offers check 'sell by' dates etc

do not have fixed meal plans look for bargains

can bulk buy and pass savings to customer

supermarket's own brands are cheaper

use 'money off' coupons

compare prices between shops for

'best buy'

compare prices per 100g/unit to get best value

shop locally save transport costs etc [5] 10 points 2 points = 1 mark

(ii) Saving fuel

use microwave less time (less fuel) use quick methods e.g. frying/grilling

low heat - several dishes at once steam foods

use only the oven for meal several dishes at once

batch bake

use only the hob for meal

reduce size of flame

use pressure cooker quicker - several items at once

use convenience foods

keep lid on pan

do not overcook food

cut potatoes into smaller pieces less cooking time (less fuel) do not preheat oven too long cook only the amount of food

required

turn off electric cookers before end

of cooking time have flat-based pans

boil only the amount of water

required for tea etc

choose materials which are good conductors of heat for pans e.g.

cast iron, copper etc

match size of pan base to hotplate

size etc

10 points 2 points = 1 mark [5]

can use some and freeze some

no need to heat oven

wastes fuel if flames reach up sides of pans

prevents loss of heat

switch off burners when not using

to avoid reheating

use residual heat

to have good contact between hotplate and pan

Page 6	Mark Scheme: Teachers' version	Syllabus	Paper
	IGCSE – May/June 2011	0648	01

(b) Convenience foods

Advantages: saves time (quick to prepare)

saves energy (not tiring)

easy to prepare easy to store easy to transport little waste

can be kept for emergencies

consistent result wide variety available

may have extra nutrients added e.g. vitamin C to dried potato

cook may not have the ability to prepare the product well e.g. puff

pastry easy to use

Disadvantages: more expensive than fresh

must follow instructions carefully for good results

small servings

nutrients lost during processing not replaced

low in dietary fibre

high in fat high in sugar high in salt

artificial colourings and flavourings may be added use of additives – long-term effects not known etc

10 points covering both areas

2 points = 1 mark [5]

[3]

7 (a) Nutritional value of pulses

LBV – protein – (soya HBV) – fat – carbohydrate/starch – dietary fibre (NSP) – iron – thiamine – nicotinic acid – calcium

6 points 2 points = 1 mark

(b) Examples of pulses

butter beans – haricot beans – mung beans – adzuki beans – borlotti beans – split peas – lentils – soya beans – chick peas – flageolet beans – black-eyed beans – dhal – peanuts/ground nuts

4 points 2 points = 1 mark [2]

(c) Importance of pulses

easily produced dry so easily stored cheap to produce

can be mixed with another LBV food - to give HBV protein - complementation

tilling

give variety to meals valuable in vegan diet

4 points 2 points = 1 mark [2]

Page 7	Mark Scheme: Teachers' version	Syllabus	Paper
	IGCSE – May/June 2011	0648	01

(d) <u>TVP</u>

Textured Vegetable Protein
made from soya beans — HBV protein
(must give these 2 points — asked in question)
textured and flavoured to resemble meat
shaped into cubes or granules
cheaper alternative to meat
used as a meat substitute — in sausages, pies, curries etc
can be used as an extender by mixing with meat
no waste
low in fat
conforms with dietary guidelines — reduction in saturated fat
useful for vegetarians
iron, thiamine and riboflavin can be added
can be used in canteen meals
used in convenience foods e.g. Pot Noodles

2 points = 1 mark [5]

(e) Preparing and cooking dried red kidney beans

needs little cooking etc

8 points

soak – to take up water lost during drying – to allow them to soften – swell – cook more quickly

boil – for 15 minutes during cooking time – destroys toxins – which occur naturally in kidney beans – prevents food poisoning

6 points 2 points = 1 mark [3]

[Section B Total: 60]

Page 8	Mark Scheme: Teachers' version	Syllabus	Paper
	IGCSE – May/June 2011	0648	01

Section C

Answer either 8(a) or 8(b).

8 (a) High levels of bacteria in food can cause food poisoning.

Discuss ways of preventing food poisoning when storing, preparing and cooking food. [15]

The answer may include the following knowledge and understanding.

Conditions for growth of bacteria

warmth - moisture - food - time - suitable pH - some require oxygen

Symptoms of food poisoning

vomiting – diarrhoea – headache – tiredness/exhaustion – abdominal pain – fever – double vision

Storing food

clean containers — cool place/refrigerator — covered — especially high risk foods — e.g. meat/fish/milk/eggs — to prevent cross-contamination — use in rotation — check 'use by' dates — fresh meat/fish — use on day of purchase — follow storage instructions — cool leftover food rapidly — use within 24 hours — keep raw and cooked food separate — raw meat at bottom of refrigerator — so drips do not fall onto other foods — check containers regularly — weevils/rats/mice etc. — grain off floor — dry place — prevent multiplication of bacteria — check cans for bulges — indicates seal has been damaged — bacteria entered — food still spoils in refrigerator — action of bacteria slower — do not thaw then refreeze food — bacteria will have multiplied in warmth — bacteria dormant in freezer — spoilage halted etc.

Preparing food

wash hands - after toilet/raw meat/vegetables with soil - avoid cross-contamination - no coughing/sneezing over food - do not cook if ill - so bacteria are not passed to others tie back/ cover long hair - bacteria from hair could get into food - no long fingernails dirt and bacteria collect underneath - clean apron - no outdoor clothes - avoid transfer of bacteria from outside - do not touch face during food preparation - handle food as little as possible - no rings - food/bacteria trapped in settings - no nail varnish - flakes off into food - cover cuts with waterproof dressings - bacteria will be on skin - no licking spoons/fingers - bacteria from mouth transferred to food - separate chopping board/knife for raw and cooked food - equipment clean - work surfaces clean - wash up in hot soapy water - clean tea towel/allow to dry in air - no chipped plates used - avoid introducing bacteria from dirty cloths - dish cloth not to be used for cleaning floor etc. boil/bleach dish cloth regularly - kill bacteria - cover waste bin - clean up spills/pools of water - to avoid attracting mosquitoes - avoid insects/vermin - wrap waste tightly - bin outside kitchen - no animals in kitchen - animals must not use family's meal plates dispose of rubbish/waste regularly - throw away/wash food dropped on floor - no flies etc. in kitchen – carry bacteria – etc.

Cooking food

thoroughly cook foods — especially meat/eggs — use meat thermometer/food probe — should reach 72°C in centre — maintain for 2 minutes — to kill bacteria — e.g. Salmonella — do not keep warm — re-infected with bacteria from air — know source of food — danger of BSE etc. — clean water supply — should reheat until piping hot — use food probe — do not reheat after 24 hours — only reheat once — danger of barbecues, food overcooked on outside but not hot enough in centre — warmth encourages bacterial growth — cook just before eating if possible — serve immediately — do not use raw eggs if possible — in mayonnaise/marzipan — danger of Salmonella — do not use cracked eggs etc.

	l l	1000 maj/came 2011	<u> </u>
(a)	Band	Descriptor	Marks
	High	 Can identify conditions for bacterial growth. Some symptoms of food poisoning identified. Is able to identify and discuss several points on preventing spread of bacteria during storing, preparing and cooking food. 	11–15
		 Gives examples to illustrate points made. Understanding of the topic is apparent. Information is specific and generally accurate. All areas of question addressed. Answers are detailed where appropriate. Some scientific facts included. 	
	Middle	 Some conditions for bacterial growth given. May give some symptoms of food poisoning. Is able to identify several points on preventing the spread of bacteria during storing, preparing and cooking food. Some discussion or explanations given. Gives a few examples to illustrate points made. Shows a basic understanding of the topic. Information is basic and generally accurate. Some areas of question addressed. Gaps in knowledge will be apparent. May be a few scientific facts. Answer will be detailed in parts and superficial in others. Overall lack of detail. 	6–10
	Low	 May give conditions for bacterial growth. Little information on food poisoning. Mentions some points on preventing spread of bacteria during storing, preparing and cooking. May give examples to illustrate. Answer tends to be a list of statements. Not always accurate. Information is brief. Answers not specific. Little or no scientific information. Emphasis on one part of the question. Lack of knowledge will be apparent. 	0–5

	IGCSE – May/June 2011	0648	01

(b) Cows' milk is important in the diet but it does not keep long unless it is treated or made into another dairy product.

Discuss this statement under the following headings:

- (i) nutritive value of milk;
- (ii) different methods of treating milk to extend its shelf-life;

(iii) dairy products.

[15]

Answers may include the following knowledge and understanding.

(i) Nutritive value of milk

```
HBV – protein – casein – lactalbumin – lactoglobulin – fat – vitamin A – vitamin D – calcium – phosphorus – thiamin – riboflavin – little nicotinic acid – lactose – no NSP – no vitamin C – no iron high proportion of water functions of named nutrients
```

(ii) Methods of treating to prevent souring

Pasteurised

```
72^{\circ}C (162°F) – 15 seconds – HTST method OR 63°C (145°F) – 30 minutes – Holder method
```

cooled rapidly – to not more than 10°C destroys harmful (pathogenic) bacteria

Sterilised

homogenised – 113°C (230°F) – 15 to 40 minutes

UHT

 132°C (270°F) – 1 second – cooled rapidly – sealed in foil-lined containers – store at room temperature if unopened

Dried

homogenised – may be skimmed – water removed – by spray-drying – fine jet into chamber of hot air – water evaporates and powder falls to bottom – or roller-drying – spread onto heated rollers – water evaporates – film of dry milk scraped off

Condensed

homogenised – heated to 80° C (176°F) – 15 minutes – sugar added – heated in vacuum – some water removed – cooled – sealed in cans

Evaporated

```
as condensed milk - no addition of sugar - sealed cans sterilised - 20 minutes - 115.5°C (240°F)
```

Frozen

pasteurised homogenised milk – in polythene bags – up to 1 year – pasteurised milk not suitable – separates on thawing

Page 11	Mark Scheme: Teachers' version	Syllabus	Paper
	IGCSE – May/June 2011	0648	01

(iii) Dairy products

Butter

cream separated from milk — pasteurised — held at 4°C — to harden fat globules — then at 15–18°C — for 3 or 4 hours — to develop acidity — cooled to 7°C — churned — fat globules stick together — buttermilk drained off — fat chilled — washed — hardened — salt added — for flavour — and to preserve — worked until smooth

Cream

milk left to stand for 24 hours - cream forms a layer on surface - skimmed off - cooled - pasteurised - single/double/whipping - can be acted upon by lactic acid bacteria - soured cream

Cheese

many varieties — pasteurised milk used — bacteria culture added — converts lactose to lactic acid — acid helps to preserve cheese — heated — 30°C — rennet added — milk clots — caseinogen coagulates with acid — left for 45 minutes — curds and whey formed — curd cut — whey drained off — curd scalded to 30°C — 45 minutes — stirred — cut into blocks — piled up — drained — cut into chips — salt added — packed into moulds — pressed for 24 hours — sprayed with hot water — to form rind — ripens — at 110°C — for 4 months — develops flavour — smell — texture — mature cheeses ripened longer — cottage/blue-veined/cream cheese

Yoghurt

made from all types of milk — homogenised — pasteurised — at 85-95°C — cooled — bacteria added — lactobacillus bulgaricus — streptococcus thermophillus — incubated 4-6 hours — becomes acidic — flavours develop — proteins coagulate — cooled — flavours etc. added

gc 12	Mark Concinc: Teachers Version	Cynabas	i apci
	IGCSE – May/June 2011	0648	01
Mark	Bands Descriptors		Marks
High	 Candidate can name several nutrients with functions can state at least 3 methods of treating milk and details of methods. Can name at least 3 dairy products. Gives details on their production. Comments are precise and related to specific explored. Information given is accurate. 	d can give	11–15
Middle	 Can name many of the nutrients in milk and son Can state at least 2 methods of treating milk and details of methods. Can name at least 2 dairy products and can giv on production. Some gaps in knowledge. Terminology not always accurate. Information given is not always precise. 	d can give some	
Low	 Can name a few nutrients. Functions not always known. 1 or 2 brief notes on methods of treating milk. 1 or 2 dairy products mentioned. Information not always accurate. General information. Poor knowledge of production. Limited knowledge of the topic apparent. 		0–5
