## Cambridge IGCSE ${ }^{\text {TM }}$

## INFORMATION AND COMMUNICATION TECHNOLOGY <br> 0983/22 <br> Paper 2 Practical Test A <br> May/June 2021 <br> MARK SCHEME

Maximum Mark: 80

## Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2021 series for most Cambridge IGCSE ${ }^{\text {™ }}$, Cambridge International A and AS Level components and some Cambridge O Level components.

PUBLISHED

## Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

## GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:
Marks awarded are always whole marks (not half marks, or other fractions).
GENERIC MARKING PRINCIPLE 3:
Marks must be awarded positively:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:
Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

## GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:
Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

## Duathlon

A duathlon is a multisport competition consisting of running and biking which can be contested on almost any terrain, although it usually takes place on tarmac. The usual format is run-bike-run. starting with a run, then transition to the bike, ther back to running again. The first run is usu than the second. A duathlon is a real test

A recent survey reports that respondents not only expect to continue their multisport participation but most will increase the number of races in which they compete. The age groups 35-39 and 40-44 have seen mianmivit

Triathlon is an endurance contest that begins with swimming, followed by cycling, and ending with running. Few things are more physically exerting than a triathlon which puts almost every part of the body under immense pressure. The main triathlon season runs from May until September. Many clubs offer taster sessions for people interested in taking up the sport.
Competitors new to
tisport are advised to start ( 400 m swim, 10 km bike, 5 km run). A m
ing race is sprint or Complete paragraph moved to correct $\quad$ of up to location with spacing maintained 1 mark in of up
 run. The top men typically finish in about 1 hour 50 minutes and the women in just over 2 hours. The one-day triathlon that covers the longest distance is the Full Ironman which covers a total of 140 miles from start to finish and takes serious dedication and $m$ bike ride have up to ats but top

It is an excellent way for $n$
Come an Olympic sport in the future. However
multisport competition, and for experiend
triathletes to add something different to their triathletes to add something different to their training routines. Both running and swimming are also very healthy methods of exercise which can be tailored to a range of physical conditions, so competing in an aquathlon can also be a way to have fun while getting fit.

Competitions take place all year round and have become very popular among athletes at a wide range of experience levels. It is not uncommon to see a range of distances in one race to cater for various levels of fitness and experience. Standard warm water distances are 2.5 km run, 1000 m swim, 2.5 km run. If the water temperature is below $22^{\circ} \mathrm{C}$ then it becomes a wetsuit-mandatory 1000 m swim and a single 5 km run. Long course distances are 2000 m swim and 10 km of running. Where the water temperature is low (around $16^{\circ} \mathrm{C}$ ) the course may be shortened or possibly cancelled. The running stage may take place on trails, beaches, or tracks, while the swim stage is competed in open water environments or swimming pools.

## Winter Triathlon

sporting events. Global warming has created:

- warmer winter temperatures
- reduced snowfall
- thinner lake ice
- shorter snow seasons
- increased risk of natural hazards
- more extreme events such as avalanche and landslides.

Greenhouse gases emitted since the beginning of the Industrial Revolution have so far warmed the world by about $1^{\circ} \mathrm{C}$ on average. This effect has been more pronounced in the Alps, the mountain range most visited for winter sports, which has warmed by about $2^{\circ} \mathrm{C}$. This is starting to affect the snow and ice in winter which will have profound consequences for the winter sports industry. In terms of hosting winter sporting events, even if emissions are cut to meet the target of the Paris climate agreement of 2015 , only 13 of 21 former hosts would be cold enough to hold winter sports in 2050. This number would drop to just 8 by 2080. The future of winter sports for most regions is under threat this century

The running is contested on hardpacked snow courses with distances ranging from $5-9 \mathrm{k}$. Racers typically wear normal running shoes or crosscountry snikes. The mountain bike leg is held on
