Paper 3 Core Theory

October/November 2020

MARK SCHEME

Maximum Mark: 80

---

**Published**

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2020 series for most Cambridge IGCSE™, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

---

This document consists of **10** printed pages.

**PUBLISHED****Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

**GENERIC MARKING PRINCIPLE 1:**

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

**GENERIC MARKING PRINCIPLE 2:**

Marks awarded are always **whole marks** (not half marks, or other fractions).

**GENERIC MARKING PRINCIPLE 3:**

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

**GENERIC MARKING PRINCIPLE 4:**

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

**GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

**GENERIC MARKING PRINCIPLE 6:**

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

**Science-Specific Marking Principles**

1	Examiners should consider the context and scientific use of any keywords when awarding marks. Although keywords may be present, marks should not be awarded if the keywords are used incorrectly.
2	The examiner should not choose between contradictory statements given in the same question part, and credit should not be awarded for any correct statement that is contradicted within the same question part. Wrong science that is irrelevant to the question should be ignored.
3	Although spellings do not have to be correct, spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. ethane / ethene, glucagon / glycogen, refraction / reflection).
4	The error carried forward (ecf) principle should be applied, where appropriate. If an incorrect answer is subsequently used in a scientifically correct way, the candidate should be awarded these subsequent marking points. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.
5	<p><u>'List rule' guidance</u></p> <p>For questions that require <i>n</i> responses (e.g. State <b>two</b> reasons ...):</p> <ul style="list-style-type: none"> <li>• The response should be read as continuous prose, even when numbered answer spaces are provided.</li> <li>• Any response marked <i>ignore</i> in the mark scheme should not count towards <i>n</i>.</li> <li>• Incorrect responses should not be awarded credit but will still count towards <i>n</i>.</li> <li>• Read the entire response to check for any responses that contradict those that would otherwise be credited. Credit should <b>not</b> be awarded for any responses that are contradicted within the rest of the response. Where two responses contradict one another, this should be treated as a single incorrect response.</li> <li>• Non-contradictory responses after the first <i>n</i> responses may be ignored even if they include incorrect science.</li> </ul>

**6** Calculation specific guidance

Correct answers to calculations should be given full credit even if there is no working or incorrect working, **unless** the question states 'show your working'.

For questions in which the number of significant figures required is not stated, credit should be awarded for correct answers when rounded by the examiner to the number of significant figures given in the mark scheme. This may not apply to measured values.

For answers given in standard form (e.g.  $a \times 10^n$ ) in which the convention of restricting the value of the coefficient ( $a$ ) to a value between 1 and 10 is not followed, credit may still be awarded if the answer can be converted to the answer given in the mark scheme.

Unless a separate mark is given for a unit, a missing or incorrect unit will normally mean that the final calculation mark is not awarded. Exceptions to this general principle will be noted in the mark scheme.

**7** Guidance for chemical equations

Multiples / fractions of coefficients used in chemical equations are acceptable unless stated otherwise in the mark scheme.

State symbols given in an equation should be ignored unless asked for in the question or stated otherwise in the mark scheme.

Question	Answer	Marks
1(a)(i)	sand ;	1
1(a)(ii)	ethanol ; low(er) boiling point ;	2
1(a)(iii)	salt ;	1
1(b)	(anhydrous) copper(II) sulfate ; turns blue ; <b>OR</b> (anhydrous) cobalt chloride; turns pink ;	2

Question	Answer	Marks
2(a)	steady / constant / uniform / $2\text{ms}^{-2}$ (as $2\text{m/s}^2$ ) ; acceleration ;	2
2(b)(i)	10 (m / s) ;	1
2(b)(ii)	area under line / $0.5 \times 6 \times 12$ ; 36 (m);	2
2(c)(i)	<b>C</b> ;	1
2(c)(ii)	(time =) distance $\div$ speed ;	1
	10 (s) ;	1
2(c)(iii)	some people may walk slower / people may not set off straight away / small children walk slower / carrying heavy items / prevents accidents / ensure road is clear / AVP ;	1

Question	Answer	Marks
3(a)	protons 11 ; neutrons 12 ;	2
3(b)	11 electrons <b>OR</b> one electron in outer shell; 2 8 1 ;	2
3(c)(i)	2 (1) 2 ;	1
3(c)(ii)	4 correct [2] 2–3 correct [1]  sodium Na <sup>+</sup> chloride Cl <sup>-</sup>	2

Question	Answer	Marks
4(a)	ray drawn from any point on coin extending beyond edge of bowl just missing top edge ;	1
4(b)	<b>M1</b> normal ray correctly drawn ; <b>M2</b> angle of incidence correctly indicated ;	2
4(c)(i)	convex / converging ;	1
4(c)(ii)	ray through centre of lens is extended straight backwards ; other ray is parallel to principal axis ;	2
4(c)(iii)	tip (O) drawn at intersection of the two rays ; object drawn perpendicular to axis <b>AND</b> with base on axis.	2

Question	Answer	Marks
5(a)(i)	<i>any two from:</i> each carbon (atom) joined to 3 others ;  delocalised electron(s) ;  layer (arrangement) ;  Giant structure / macromolecule ;  weak forces (between layers) ;	<b>2</b>
5(a)(ii)	soft / good conductor of electricity ;	<b>1</b>
5(b)	diamond ;	<b>1</b>
5(c)(i)	oxygen ;	<b>1</b>
5(c)(ii)	carbon + oxygen → carbon dioxide <b>OR</b> carbon + oxygen → carbon monoxide ;	<b>1</b>
5(d)	iron / zinc / copper / lead ;	<b>1</b>
5(e)(i)	methane ;  CH <sub>4</sub> ;	<b>2</b>
5(e)(ii)	hydrocarbon ;	<b>1</b>

Question	Answer	Marks
6(a)	D ; C ; B ;	3
6(b)	value 22–28 inclusive ;	1
6(c)	idea of decay being random in nature ;	1

Question	Answer	Marks
7(a)	lead / Pb ; oxygen ;	2
7(b)	magnesium zinc lead copper ;;	2

Question	Answer	Marks
8(a)(i)	(density =) mass ÷ volume / (volume =) mass ÷ density ; 0.5 (m <sup>3</sup> ) ;	2
8(a)(ii)	8000 ; newton / N ;	2
8(b)(i)	gravitational potential (energy) / GPE ;	1
8(b)(ii)	chemical (potential energy) ;	1
8(c)	more (power) ;	1

Question	Answer	Marks
9(a)(i)	two / 2 ;	1
9(a)(ii)	nine / 9 ;	1
9(b)(i)	nitric (acid);	1
9(b)(ii)	universal indicator / pH meter / pH paper ; green / pH 7 ;	2
9(c)	(limestone is a) base / alkaline (substance) ; neutralises (acid in soil) / reduces acidity / increases pH ;	2

Question	Answer	Marks
10(a)	electrons ; transfer from girl / transfer to balloon ;	2
10(b)(i)	<b>A</b> ;	1
10(b)(ii)	balloons have same / similar charge ;	1
10(c)	<b>R</b> ; (balloon and child) have opposite charge ;	2

Question	Answer	Marks
11(a)	contains a double bond ; carbon to carbon ;	2
11(b)(i)	fractional distillation ;	1
11(b)(ii)	cracking ;	1
11(c)	$\begin{array}{cc} \text{H} & \text{H} \\   &   \\ \text{C} = & \text{C} \\   &   \\ \text{H} & \text{H} \end{array}$ double C = C bond ; rest of molecule ;	2

Question	Answer	Marks
12(a)(i)	coil becomes magnetised / current produces a magnetic field ; repelled by bar magnet ;	2
12(a)(ii)	magnetic field (of coil) reversed ;	1
12(b)	<i>any two from</i> magnetic field keeps reversing ; attracts and then repels repeatedly ; the plastic sheet moves up and down / vibrates ; causing the air to vibrate ;	2
