Paper 5 Practical Test

May/June 2010

1 hour 30 minutes

Candidates answer on the Question Paper.

Additional Materials:

As listed in Instructions to Supervisors.

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

Chemistry practical notes for this paper are printed on page 16.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

| For Examiner's Use |  |  |  |  |  |  |  |  |  |  |

This document consists of 11 printed pages and 5 blank pages.

1 This question is about variation in leaves.

For Examiner's Use

(a) You are provided with 20 leaves of the same species. Measure the length *I* of each leaf in millimetres as shown in Fig. 1.1a. If the lamina does not meet the petiole evenly on either side of the leaf use the longer measurement. See Fig. 1.1b.

Enter your measurements in Table 1.1.

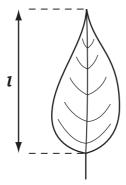

Fig. 1.1a

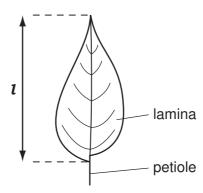

Fig. 1.1b

Table 1.1

|    | length of leaf // mm |
|----|----------------------|
| 1  | 11                   |
| 2  | 12                   |
| 3  | 13                   |
| 4  | 14                   |
| 5  | 15                   |
| 6  | 16                   |
| 7  | 17                   |
| 8  | 18                   |
| 9  | 19                   |
| 10 | 20                   |

[2]

(b) Calculate the average (mean) length of the 20 leaves. Show your working.

average = \_\_\_\_\_mm

[2]

| (c) | The                     | e difference betwee                        | en the greatest leng | th and the s | smallest leng        | th is the range.  |         |  |  |  |  |  |  |  |

| You are going to find the specific heat capacity of the material of a can. The specific I capacity of a material is the heat energy required to raise 1g of the material by 1°C.   | neat        |
|--|-------------|
| (a) Find the mass of the can to the nearest gram.  |             |
| Record its mass below.   |             |
| mass of can, <b>m</b> <sub>1</sub> , =g  | [1]         |
| (b) Place the lagging around the can. Place the thermometer inside the can and leave two minutes. Read the temperature, <b>t</b> <sub>1</sub> , to the nearest 0.5 °C and record it below.   | of for      |
| temperature of can, <b>t</b> <sub>1</sub> =°C  | [1]         |
| (c) (i) Heat enough water in a beaker to about one-third fill the can. When temperature is just above 70 °C, remove the Bunsen. As soon as the tempera of the water has cooled to exactly 70.0 °C pour the water into the can. Read temperature, t <sub>2</sub> , to the nearest 0.5 °C of the water after exactly two minu Record this temperature. | ture<br>the |
| temperature of water, <b>t</b> <sub>2</sub> =°C  | [1]         |
| (ii) Remove the lagging and pour the water into a measuring cylinder. Record volume.   | the         |
| volume of water =cm <sup>3</sup>   | [1]         |
| (iii) 1 cm³ of water has a mass of 1 g. Calculate the mass, <b>m</b> <sub>2</sub> , of the volume of w you recorded in <b>(c)(ii)</b> .  | ater        |
| mass of water, <b>m</b> <sub>2</sub> =g  | [1]         |
| (d) Calculate  |             |
| (i) $\mathbf{t}_3$ , the fall in temperature of the hot water, $\mathbf{t}_3$ = (70.0 - $\mathbf{t}_2$ ).  |             |
| $t_3 = \underline{\hspace{1cm}}^{\circ} C$ (ii) $t_4$ , the rise in temperature of the can, $t_4 = (t_2 - t_1)$ .  |             |
| t <sub>4</sub> =°C   | [2]         |

2

(e) Use the equation to calculate the specific heat capacity, **shc**, of the material of the can.

For Examiner's Use

$$\text{shc} \quad = \quad \frac{\textbf{m}_2 \quad \textbf{x} \quad \textbf{t}_3 \quad \textbf{x} \quad 4.2}{\textbf{t}_4 \quad \textbf{x} \quad \textbf{m}_1}$$

specific heat capacity of the material of the can = 
$$_{\text{max}}$$
 J g<sup>-1</sup> °C<sup>-1</sup> [3]

3 You are going to investigate the rate of reaction between magnesium and hydrochloric acid.

Read through the procedure before starting the experiment.

- (a) (i) Set up the apparatus as shown in Fig. 3.1.
  - Fill the 100 cm<sup>3</sup> measuring cylinder and trough with water.

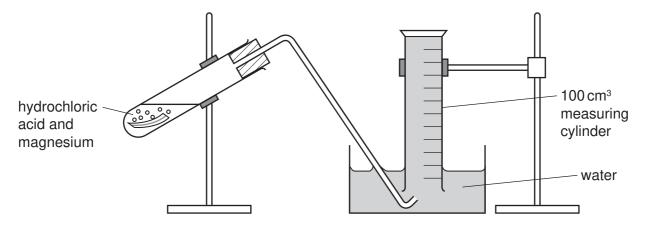

Fig. 3.1

- (ii) Place 20 cm<sup>3</sup> of the hydrochloric acid in the large test-tube.
  - Cut 6 cm of magnesium ribbon from the length provided.
  - Loosely fold the piece of magnesium ribbon and place it in the acid contained in the test-tube. Immediately replace the stopper and delivery tube and start the timer.
  - Read the volume of gas in the measuring cylinder after 20, 40, 60 and 80 seconds.
  - Record the volumes in Table 3.1. [2]
- **(b) (i)** You will now repeat the procedure using the same length of magnesium but different volumes of acid and water.
  - Wash out the contents of the test-tube.
  - Refill the measuring cylinder with water.
  - Place 16 cm<sup>3</sup> of hydrochloric acid in the test-tube and 4 cm<sup>3</sup> of water.
  - Cut 6 cm of magnesium ribbon and place it in the acid. Replace the stopper and delivery tube.
  - Immediately start the timer.
  - Read the volume of gas in the measuring cylinder after 20, 40, 60 and 80 seconds.
  - Record the volumes in Table 3.1.

(ii) Repeat the experiment **two** more times using volumes of acid and water as shown in Table 3.1. Record the results in Table 3.1. [2]

For Examiner's Use

Table 3.1

| volume of 2<br>mol/dm <sup>3</sup> | volume of water / cm <sup>3</sup> | concentration of acid in the    | volume of gas collected/c |      |      |      |  |  |  |  |  |

iner's

#### **CHEMISTRY PRACTICAL NOTES**

#### **Test for anions**

| anion   | test  | test result                            |
|---|---|--|
| carbonate (CO <sub>3</sub> <sup>2-</sup> )                | add dilute acid   | effervescence, carbon dioxide produced |
| chloride (C <i>l</i> ·) [in solution]                     | acidify with dilute nitric acid, then add aqueous silver nitrate          | white ppt.                             |
| nitrate (NO <sub>3</sub> -)<br>[in solution]              | add aqueous sodium hydroxide then aluminium foil; warm carefully          | ammonia produced                       |
| sulfate (SO <sub>4</sub> <sup>2-</sup> )<br>[in solution] | acidify then add aqueous barium chloride <i>or</i> aqueous barium nitrate | white ppt.                             |

#### Test for aqueous cations

| cation                                   | effect of aqueous sodium hydroxide                         | effect of aqueous ammonia                                      |
|--|--|--|
| ammonium (NH <sub>4</sub> <sup>+</sup> ) | ammonia produced on warming                                | -  |
| copper(II) (Cu <sup>2+</sup> )           | light blue ppt., insoluble in excess                       | light blue ppt., soluble in excess giving a dark blue solution |
| iron(II) (Fe <sup>2+</sup> )             | green ppt., insoluble in excess                            | green ppt., insoluble in excess                                |
| iron(III) (Fe <sup>3+</sup> )            | red-brown ppt., insoluble in excess                        | red-brown ppt., insoluble in excess                            |
| zinc (Zn <sup>2+</sup> )                 | white ppt., soluble in excess giving a colourless solution | white ppt., soluble in excess giving a colourless solution     |

#### **Test for gases**

| gas                               | test and test results            |
|-----------------------------------|----------------------------------|
| ammonia (NH <sub>3</sub> )        | turns damp red litmus paper blue |
| carbon dioxide (CO <sub>2</sub> ) | turns limewater milky            |
| chlorine (Cl <sub>2</sub> )       | bleaches damp litmus paper       |
| hydrogen (H <sub>2</sub> )        | "pops" with a lighted splint     |
| oxygen (O <sub>2</sub> )          | relights a glowing splint        |
