Paper 6 Alternative to Practical

October/November 2011

1 hour

Candidates answer on the Question paper

No Additional Materials are required.

#### **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

This document consists of 18 printed pages and 2 blank pages.

# **BLANK PAGE**

1 Fig. 1.1 shows the upper and lower surfaces of a leaf after being placed into boiling water.

For Examiner's Use

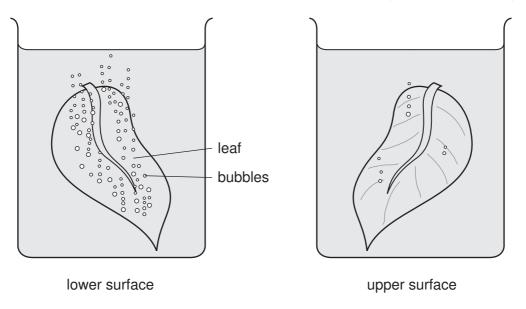

Fig. 1.1

(a)	(i)	Explain why bubbles are produced.
		[2

(ii) A second leaf was taken and its outline traced onto a piece of 15 cm x 15 cm squared paper. This tracing is shown in Fig. 1.2.

For Examiner's Use

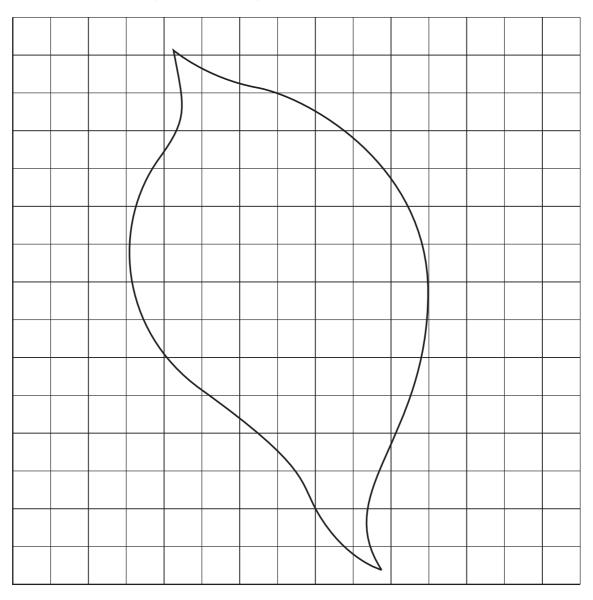

Fig. 1.2

• Write the letter **C** in the **complete** squares. Count the number of complete squares.

 Write the letter P in any incomplete squares that have an area of half a square or more.

- Ignore the rest of the squares.
- Add C + P to estimate the area of the leaf. You will use your answer in (a)(iii).

(iii) There are approximately 100 stomata per **square millimetre** on the lower surface of this leaf.

For Examiner's Use

Using the leaf surface area you have determined (a)(ii), calculate the total number of stomata found on the lower surface of the leaf.

area of leaf in mm<sup>2</sup> =

total number of stomata = \_\_\_\_\_[2]

(iv) There are usually fewer stomata found on the upper surface of a leaf.

Suggest why this is beneficial to a plant.

**(b)** Fig. 1.3 shows an outline cross section of a piece of celery. The celery has been placed into red dye for 4 hours.

On Fig. 1.3, shade the areas to show where you would expect the red dye to be found.

Label the shaded areas with the correct name for this tissue.

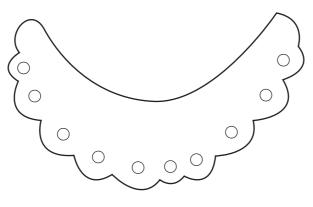

Fig. 1.3

2 The science class is investigating the properties of carbon dioxide. They are using the apparatus shown in Fig. 2.1 to make and test the gas. They carry out three experiments.

For Examiner's Use

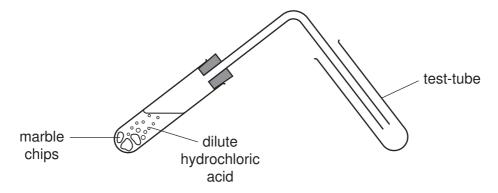

Fig. 2.1

### **Experiment 1**

They place about 3 cm<sup>3</sup> of distilled water in a test-tube and add a few drops of Universal Indicator. They then let the carbon dioxide bubble through the water and Universal Indicator. They see a colour change. They decide that a weak acid has been formed in the test-tube.

(a)	(i)	The colour changes from to	[2]
	(ii)	Name the weak acid in the test-tube.	
			[1]

# **Experiment 2**

For
Examiner's
1100

They wash out the test-tube and half-fill it with limewater. They bubble in carbon dioxide.

(b)	(i)	What does	the class observe	in the tub	e at first?			
								[1]
	(ii)	What does	s the class observ	ve in the	tube after m	ore carbor	n dioxide has b	een
								[1]
	The <b>(b)(</b>	teacher giv	ves the class two e					
		(b)(i)	Ca(OH) <sub>2</sub> (aq)	+ CO <sub>2</sub>	(g)	CaCO	$H_3(s) + H_2O(l)$	
		(b)(ii)	CaCO <sub>3</sub> (s) +	$H_2O(1)$	+ CO <sub>2</sub> (g)	<b></b>	Ca(HCO <sub>3</sub> ) <sub>2</sub> (	aq)
(	(iii)	Explain the	e meaning of the sy	mbols use	ed in the equa	ations.		
		(aq) means	3					
		(g) means		•••••				
		(s) means						[3]

		There is a			of calci	um carbona	ate which dissol	ves
		when more	e carbon dioxide is	bubbled ir	۱.			[1]
Exp	erin	nent 3						
			pparatus in Fig. 2.1 nt into the test-tube				•	hey

#### Ex

- (c) Choose two correct statements from lines A, B, C and D below.
  - A Carbon dioxide burns in air.
  - В Carbon dioxide does not support combustion.
  - Carbon dioxide does not burn in air.
  - **D** Carbon dioxide supports combustion.

The two correct statements are lines \_\_\_\_\_ and \_\_\_\_ [1]

# **BLANK PAGE**

**3** A student is finding the resistances of single and parallel wires using the circuit shown in Fig. 3.1.

For Examiner's Use

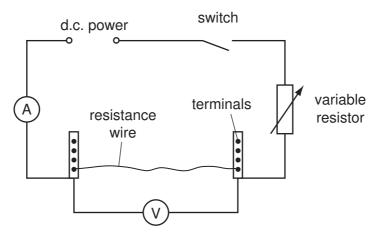

Fig. 3.1

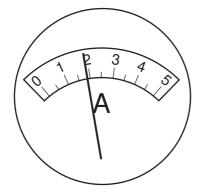

- She connects a 25 cm length of resistance wire between the terminals.
- She closes the switch and notes the readings on the ammeter and voltmeter, and records them in Table 3.1.
- She opens the switch and then connects a second piece of resistance wire so that there are 2 identical wires in parallel between the terminals.
- She closes the switch and records the new ammeter and voltmeter readings.
- She finds the ammeter and voltmeter readings using 3 and 4 wires in parallel, recording them in Table 3.1 over the page.

(a) The ammeter and voltmeter readings for 2 wires in parallel are shown in Fig. 3.2.

For Examiner's Use

[2]

(i) Read the ammeter and voltmeter and record the values in Table 3.1.

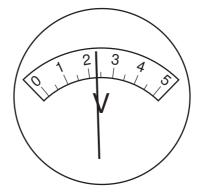

Fig. 3.2

(ii) Calculate the resistances for 2 wires and 3 wires in parallel.

Record them in the last column of Table 3.1.

Use the formula

resistance in ohms = 
$$\frac{\text{potential difference in volts}}{\text{current in amps}}$$

[2]

Table 3.1

number of resistance wires	current/A	potential difference/V	total resistance/ ohms
1	1.0	2.5	2.5
2			
3	2.5	2.0	
4	3.2	1.9	0.6

		Draw a smooth curve, extending it so that the resistance of 5 wires in parallel	Examiner's Use
		be read.	
			[3]
	(ii)	Use your graph to find the resistance of 5 wires in parallel.	
		Show how you do this on the graph.	
		resistance of 5 wires in parallel = ohms	[2]
(c)	The	e student is not satisfied that the resistance she calculated for 1 wire is accurate.	
(0)		ggest how she can find a more reliable value using the same apparatus.	•
	(	gg	
			[1]

**4** (a) A student carried out an experiment to investigate the effect of change of temperature on the activity of the enzyme pepsin.

For Examiner's Use

Pepsin breaks down protein in the stomach. Its activity can be measured by timing how long it takes to break down a cloudy protein solution. The solution becomes clear.

- The student put 5.0 cm<sup>3</sup> of the protein solution into a test-tube and added 1.0 cm<sup>3</sup> hydrochloric acid.
- He put 1 cm³ of pepsin solution into another test-tube.
- He put both test-tubes into a water bath set at 35 °C until they both reached this temperature.
- He then poured the pepsin solution into the protein solution and timed how long it took for the mixture to go clear. He recorded his results in Table 4.1.
- The student repeated this procedure for each temperature.

Table 4.1

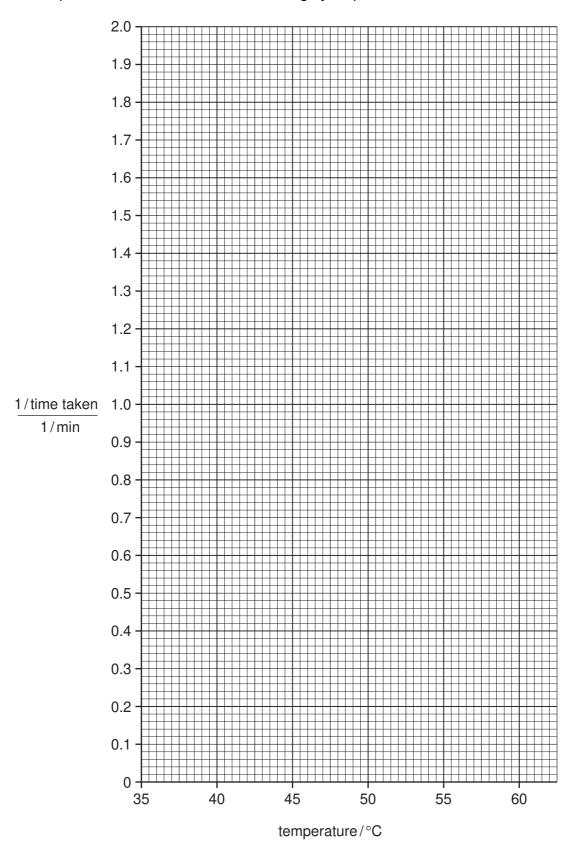

temperature/°C	time taken for mixture to go clear/min	$\frac{1}{\text{time taken}} / \frac{1}{\text{min}}$
35	6.8	0.15
40	2.9	0.34
45	1.3	
50	0.5	2.00
55	2.0	
60	7.2	0.14

Find the reciprocal of the time taken (1 / time taken) for the temperatures 45 °C and 55 °C. This is a measure of the rate of reaction. Enter your results in Table 4.1.

[2]

**(b) (i)** Plot the points to draw a graph of 1 / time taken against temperature on the grid provided. Draw a smooth curve through your points.

For Examiner's Use

[2]

	(ii)	Use the graph to estimate the optimum temperature for the activity of pep	sin.		_ For
			°C	[1]	Examiner's Use
	(iii)	Explain why you cannot be sure that this is an accurate optimum tempera	ture.		
				[1]	
(c)	Use	your knowledge of enzyme action to explain the results			
	(i)	between 35 - 45 °C,			
				[1]	
	(ii)	between 55 - 60 °C.			
				[1]	
(d)		student suggested that there should be another two tubes set up perature.	for ea	ach	
	<b>tub</b>	<b>e 1</b> cm³ of the protein solution + 1 cm³ water + 1 cm³ pepsin solution			
	<b>tub</b>	<b>e 2</b> cm³ of the protein solution + 1 cm³ hydrochloric acid + 1 cm³ water			
	Exp	plain the purposes of <b>tube 1</b> and <b>tube 2</b> .

5 A student is investigating the dyes contained in three inks, 1, 2 and 3.

For Examiner's Use

He has put spots of the inks on the start line that he has marked on a piece of chromatography paper. He has formed the paper into a tall cylinder. His arrangement is shown in Fig. 5.1.

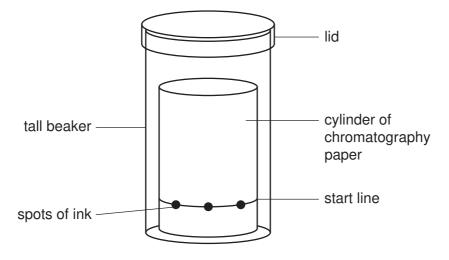

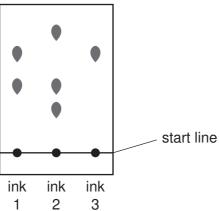

Fig. 5.1

The student is now ready to pour some liquid into the tall beaker to separate the dyes in the inks.

(a)	(i)	Name a liquid that he can use to separate the dyes in the inks.	
			[1]
	(ii)	On Fig. 5.1, draw a line to show how much of this liquid the student must place the beaker.	e in [1]
	(iii)	Explain why a lid must be placed on the beaker.	
			[1]
	(iv)	Suggest the length of time that should be allowed for the dyes to separate.	
		mins	[1]

Fig. 5.2 shows the results of the experiment.

		1 2 3				
Fig. 5.2						
(b)	Sug	gest <b>one</b> conclusion that can be made by comparing the spots obtained from each of				
	(i)	ink 1 and ink 2,				
		[1]				
	<i>(</i> )					
	(ii)	ink 2 and ink 3.				
		[1]				
(c)		student thinks that one of the three dyes contained in ink 2 may act as an d-base indicator.				
	Des	scribe how he can find out which of the three dyes will act as an indicator.				
	Nar	Name <b>two</b> reagents that he can use in this experiment.				
	rea	reagent 1				
	rea	gent 2

For Examiner's Use **6** The bending of light when it travels from air into a liquid, or from a liquid into the air, is known as refraction.

For Examiner's Use

A student is trying to compare the refraction of light by salty water and by fresh water. He has placed a coin at the bottom of an empty bucket. A ruler is placed vertically a short distance from the bucket.

The student notes the position of his eye next to the ruler when he can just see the coin above the rim of the empty bucket. This is shown in Fig. 6.1.

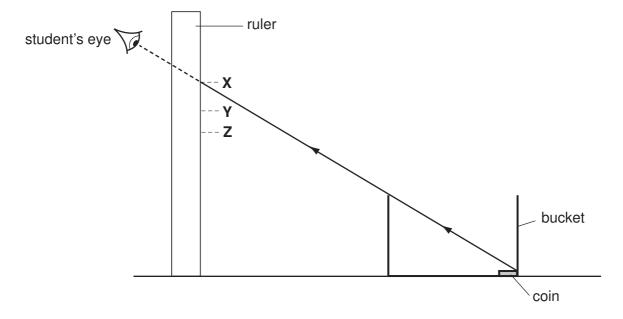

Fig. 6.1

- He records the position of his eye, point **X**, in Table 6.1.
- He fills the bucket with fresh water.
- He finds and records the new position of his eye when he can just see the coin, point Y.
- He empties the bucket and refills it with salty water.
- He finds and records point **Z** when he can just see the coin.

Fig. 6.2 shows a scale diagram of the experiment.

For Examiner's Use

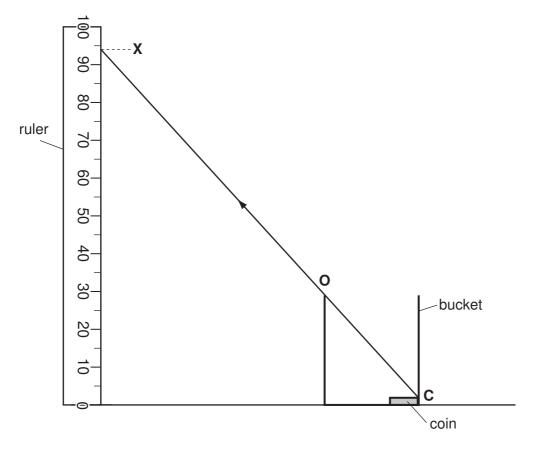

Fig. 6.2

The line **XC** shows a ray of light travelling from the coin to the student's eye. Point **O** is on this ray, just above the rim of the bucket.

(a) On the ruler in Fig. 6.2, mark and label the points **Y** and **Z**. Use the data from Table 6.1. [2]

Table 6.1

contents of the bucket	point	position on ruler/cm
air	x	94
fresh water	Y	58
salty water	Z	51

(b) On Fig. 6.2, draw the straight lines **YO** and **ZO**. See Fig. 6.1. [1]

For Examiner's Use

(c)	(c) Measure and record, to the nearest millimetre, the length of the lines that you have drawn on Fig. 6.1, and the length of line <b>XO</b> .						
	(i)	YO	mm	[1]			
	(ii)	ZO	mm	[1]			
	(iii)	хо	mm	[1]			
(d) The refractive index of a liquid is a measure of the bending of light as it enters leaves the liquid.							
	(i)	Calc	ulate the refractive index of fresh water using the formula below.				
			refractive index = $\frac{\text{length of the line } XO/mm}{\text{length of the line } YO/mm}$				
	(ii)	Calc	refractive index of fresh water =uulate the refractive index of salty water using the formula below.	[1]			
			refractive index = length of the line XO/mm length of the line ZO/mm	[4]			
			refractive index of salty water =	[1]			

(e) (i) A bird is trying to catch a fish that is swimming below the surface of a fresh water river. The bird and the fish are shown in Fig. 6.3.

For Examiner's Use

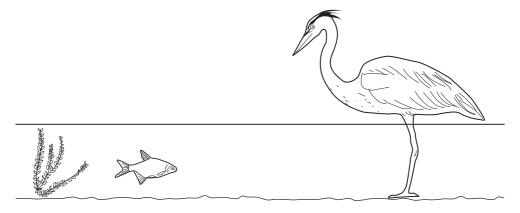

Fig. 6.3

Should the bird aim his beak above or below the position at which he sees the fish?

	Explain your answer.				
	[1]				
(ii)	How should the aim of the bird change if the fish is swimming in salty seawater instead of fresh water?				
	Explain your answer.				
	[1]
