#### READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

| For Examiner's Use |  |  |
|--------------------|--|--|

1 A student has drawn two flowers as part of an investigation to compare an insect–pollinated with a wind–pollinated flower.

For Examiner's Use

Construct a table to compare the features, visible in the diagrams, of the two flowers. Your table should include **three** features of the flowers.

[6]

2 The teacher gives a student a piece of zinc and some dilute hydrochloric acid. The student uses the apparatus in Fig. 2.1 to investigate the speed of reaction of the zinc and hydrochloric acid.

zinc dilute hydrochloric acid

Fig. 2.1

- The student places  $4 \text{ cm}^3$  of the acid in a test-tube.
- He starts his clock.
- Every minute, he records in Fig. 2.2 the total volume of gas collected in the measuring cylinder.

| time/minutes                        | 0 | 1  | 2 | 3 | 4 | 5  |
|-------------------------------------|---|----|---|---|---|----|
| total volume of gas/cm <sup>3</sup> | 0 | 50 |   |   |   | 97 |

(a) Fig. 2.3 shows the scale of the measuring cylinder at the second, third and fourth minutes. Record the readings in Fig. 2.2. [3]

| 02           | 08           | 08           |
|--------------|--------------|--------------|
| time = 2 min | time = 3 min | time = 4 min |

Fig. 2.3

- (b) The student decides that the gas is produced at a slower rate as time goes on.
  - (i) What does the student observe in the test-tube that confirms this?

[1]

© UCLES 2009

0653/06/M/J/09

(ii) Use the data in Fig. 2.3 to show that the rate of production of gas decreases as time goes on.

5

[2]

After the reaction has stopped, the student pours the liquid out of the test-tube. He compares the sizes of the piece of zinc before and after the reaction. This is shown in Fig. 2.4.

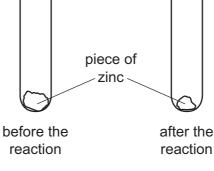

Fig. 2.4

(c) The student suggests five reasons why the rate of production of gas slowed down. Which one of his reasons is correct? Tick one box to show your answer.

| Α | the surface area of the zinc decreased   |     |
|---|--|-----|
| В | the mass of the zinc decreased           |     |
| С | the temperature of the mixture decreased |     |
| D | the concentration of the acid decreased  |     |
| E | the volume of the acid decreased         | [1] |

(d) (i) Describe how the student can show that the gas in the measuring cylinder is hydrogen.
[2]
(ii) Write a word equation for the reaction of the hydrogen gas in the test you have described in (d)(i).
[1]

**3** A student does an experiment to investigate the acceleration of a trolley. The trolley has a mass of 1 kg. It runs along a horizontal track 1 metre long. The trolley is pulled by a string that runs over a pulley, with a 1 kg mass fixed to it. When the hanging mass is allowed to fall, it pulls the trolley so that it accelerates along the track. Fig. 3.1 shows this apparatus.

8

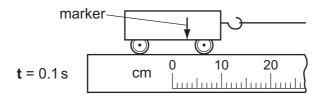

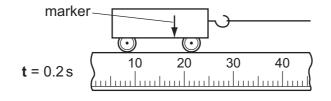

- the 1 kg mass is released at time 0 seconds
- a camera photographs the trolley at 0.1 s intervals
- the pictures of the trolley are used to find the distances it travelled
- the distances, in centimetres, are recorded in Fig. 3.2

| time <b>t</b> /s | 0 | 0.1 | 0.2 | 0.3 | 0.4 | 0.5 |
|------------------|---|-----|-----|-----|-----|-----|
| distance/cm      | 0 |     |     |     | 76  | 96  |

(a) The images of the trolley and the metre rule at t = 0.1, 0.2 and 0.3 s are shown in Fig. 3.3. Read the scales and record the distances in centimetres in Fig. 3.2. [3]

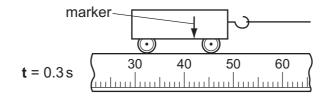

Fig. 3.3

0653/06/M/J/09

(b) Plot a graph of distance moved in centimetres (vertical axis) against time t in seconds (horizontal axis) on the grid provided. Draw a smooth curve through the points. [3]

For Examiner's Use

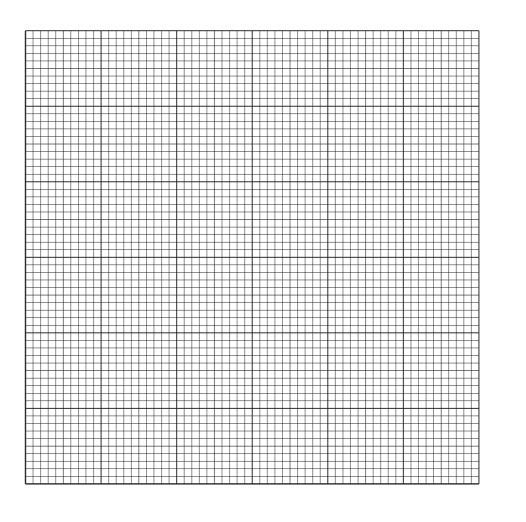

Fig. 3.4

(c) Show that the trolley accelerates as it moves along the track. You may show this on the graph or write an explanation below.

[2]

0653/06/M/J/09

| (d) | ) The student wants to change the mass of the trolley and the 1 kg mass. Suggest how the results will change if |   |     |  |
|-----|---|---|-----|--|
|     | (i)   | the trolley has a mass of 2 kg instead of 1 kg,   |     |  |
|     |   |   |     |  |
|     |   |   | [1] |  |
|     | (ii)  | the 1 kg hanging mass is replaced by a 2 kg mass. |     |  |
|     |   |   |     |  |
|     |   |   | [1] |  |

**4** Hydrogen peroxide is produced in some living cells during chemical reactions. It is poisonous if it is not removed quickly. The enzyme catalase is also found in living cells. It speeds up the breakdown of hydrogen peroxide to produce oxygen gas.

A student carried out an experiment to compare the activity of catalase in two different tissues by measuring the rate of oxygen production.

- He put some hydrogen peroxide solution into a test-tube.
- He added some detergent to produce a foam of trapped oxygen. See Fig. 4.1.
- He then added tissue **A**, potato, to the hydrogen peroxide solution and started timing.
- He measured the height of foam, **h**, every minute for 5 minutes and recorded the readings in Fig. 4.2.
- The student then repeated the experiment with tissue **B**, animal's liver.

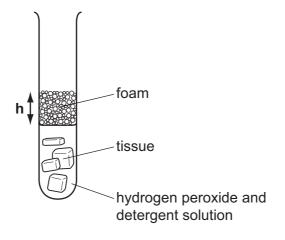

Fig. 4.1

**6** A student must find the internal diameter of a large test-tube, shown in Fig. 6.1. He is told to carry out the procedure shown below.

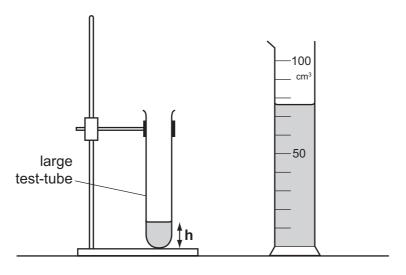

Fig. 6.1

#### Procedure

- Fill a measuring cylinder with water to the 100 cm<sup>3</sup> mark.
- Pour water from the measuring cylinder into the test-tube until it is about one-fifth full.
- Find the vertical height, h, of the water in the test-tube and record it.
- Record **V**, the volume of water remaining in the measuring cylinder.
- Add about 10 cm<sup>3</sup> of water to the test-tube. Record the new height **h** and the volume **V**.
- Repeat until there are 5 sets of readings in the table.

For Examiner's Use

(a) Fig. 6.2 shows the heights of water in the test-tube and the corresponding volumes of water remaining in the measuring cylinder, for the missing readings of h and V, in Fig. 6.3.

- (i) Use a ruler to measure  $h_1$  and  $h_2$  to the nearest millimetre and record the values in Fig. 6.3. [2]
- (ii) Read the values of  $V_1$  and  $V_2$  to the nearest cm<sup>3</sup> and record them in Fig. 6.3. [2]
- (iii) Complete the third column of Fig. 6.3.

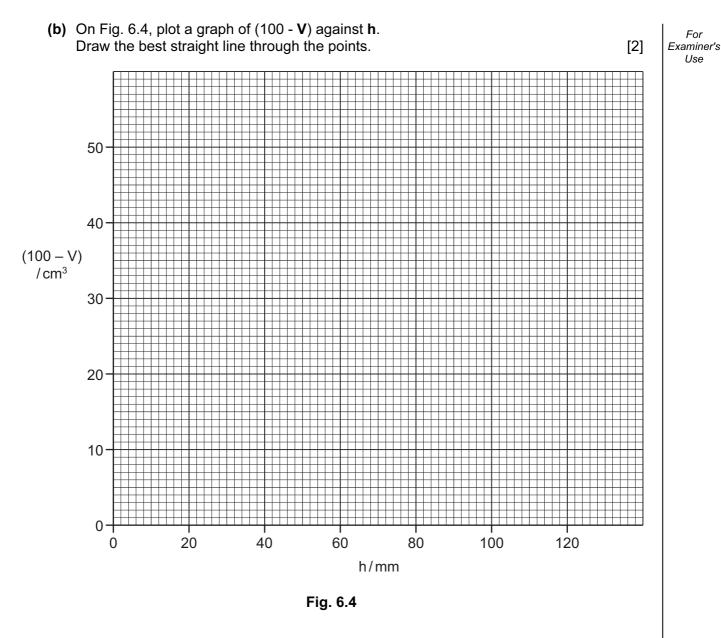

| height <b>h</b> /mm | volume <b>V</b> / cm <sup>3</sup> | (100 - <b>V</b> )/cm <sup>3</sup> |  |
|---------------------|-----------------------------------|-----------------------------------|--|
| 25                  | 89                                | 9                                 |  |
| h <sub>1</sub> =    | V <sub>1</sub> =                  | (100 - V <sub>1</sub> ) =         |  |
| h <sub>2</sub> =    | V <sub>2</sub> =                  | (100 – V <sub>2</sub> ) =         |  |
| 93                  | 60                                | 40                                |  |
| 113                 | 51                                | 49                                |  |
