Periodic table

Question Paper

| Level | Pre U |
|------------|--------------------------------------|
| Subject | Chemistry |
| Exam Board | Cambridge International Examinations |
| Topic | Periodic table- Inorganic chemsitry |
| Booklet | Question Paper |

Time Allowed: 42 minutes

Score: /35

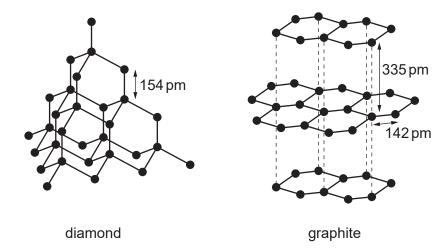

Percentage: /100

1 The structures of two allotropes of carbon are shown.

(a) With reference to these structures

(b)

| (i) | explain the meaning of the term allotropes, |
|------|--|
| | |
| | |
| | [1 |
| (ii) | state how and explain why the hardness and electrical conductivity of these allotropes differ. |
| | |
| | |
| | |
| | |
| | |
| | |
| | [4 |
| | 2010 the Nobel Prize for Physics was awarded to two researchers from Mancheste versity for their work on preparing graphene from graphite. |
| (i) | Describe the structure of graphene. |
| | |

| | (ii) | Graphene can be prepared from graphite by using sticky tape. Use your knowledge of the bonding in graphite to explain why it is possible to create graphene by this method. |
|-----|-------|--|
| | | [11] |
| | | [1] |
| (c) | | up 14 is considered to represent a spectrum of behaviour ranging from non-metal at the of the Group, through metalloid, to true metal at the bottom. |
| | With | reference to |
| | • | the electrical conductivity of the element, |
| | • | the structure and bonding in the oxides, |
| | justi | fy this statement. |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | |
| | | [3] |
| (d) | Here | e is some information about Group 14 oxides. |
| | | IV) oxide, SnO_2 , is easily prepared by oxidation of tin but lead(IV) oxide, PbO_2 , can only prepared by the action of very powerful oxidising agents on lead(II) compounds. |
| | PbC | O_2 decomposes on heating to lead(II) oxide, PbO. |
| | PbC | can also be prepared by heating lead in air but SnO is sensitive to oxidation. |
| | Ехр | lain this information. |
| | | |
| | | |
| | | |
| | | |
| | | [2] |
| | | |

[Total: 12]

| (a) | Wh | y are these elements referred to as <i>d-block</i> elements? |
|-----|------|---|
| (b) | (i) | Give the full ground state electronic configuration of an atom of zinc. |
| | (ii) | Explain why zinc is not a transition element. |
| | (, | Explain Wily Zino to Not a transition clotholic. |
| | | |
| (c) | | graph in Fig. 1.1 shows the pattern of first ionisation energies for the eler ium to zinc. |
| | | Na Mg Al Si P S Cl Ar K Ca Sc Ti V Cr Mn Fe Co Ni Cu Zn elements |
| | | Fig. 1.1 |
| | (i) | With reference to the graph in Fig. 1.1, explain the pattern of first ionisation end across Period 3, Na to Ar. |
| | | |
| | | |

.....[3]

| | (II) | the elements Sc to Cu are relatively constant with only a slight general increase. |
|----|------|--|
| | | |
| | | |
| | | |
| | | [2] |
| d) | | crystal structures of the elements iron, copper and zinc are described, using the dard abbreviations, as BCC, CCP and HCP, respectively. |
| | (i) | What does the abbreviation CCP stand for? |
| | | [1] |
| | (ii) | In terms of layer structure representations, describe the HCP and CCP crystal structures. |
| | | HCP |
| | | CCP[2] |
| | | |
| e) | | nloride of a transition metal, M , has a unit cell consisting of a CCP framework of ride anions, with the metal ions occupying half of the tetrahedral holes between the ns. |
| | (i) | What is meant by the term unit cell? |
| | | |
| | | |
| | | [2] |
| | (ii) | State, and explain in terms of the ratio of anions to tetrahedral holes, what the formula of this compound is. |
| | | formula |
| | | explanation |
| | | |
| | | [2] |

(f) Cobalt(II) chloride exists in two forms, **A**, which is blue, and **B**, which is pink.

Addition of a small amount of either of these solids to water results in a pink solution in which the colour is due to the presence of a complex ion, **C**.

On addition of concentrated hydrochloric acid this solution turns blue as another complex ion, \mathbf{D} , forms with a different shape to the complex ion \mathbf{C} .

| (i) | Give the formulae of A , B , C , and D . | |
|-------|---|-------|
| | A | |
| | В | |
| | C | |
| | D | [4] |
| (ii) | Give the shape of, and bond angles in, the ion C . | |
| | shape | |
| | bond angle | [2] |
| (iii) | Write an equation to illustrate the ligand exchange reaction involved in conversion of ${\bf C}$ to ${\bf D}$. | the |
| | | [1] |
| (iv) | State and explain why the ion D has a different shape to the ion C . | |
| | | |
| | | |
| | | [1] |
| | [Total | : 23] |
