October/November 2023

MARK SCHEME

Maximum Mark: 75

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2023 series for most Cambridge IGCSE, Cambridge International A and AS Level components, and some Cambridge O Level components.

This document consists of **14** printed pages.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always **whole marks** (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks
1	A	1

Question	Answer	Marks
2(a)	Format check	1
2(b)	<p>One mark for each appropriate test data, max two One mark for each correct accompanying reason, max two</p> <p>For example:</p> <p>Normal – 30/12/1960 ... Reason – ... (the date is written in the correct format and) should be accepted.</p> <p>Abnormal – 30/Dec/1960 ... Reason – ... (the month is not written in the correct format and) should be rejected.</p>	4
2(c)	<p>One mark per mark point, max two</p> <p>MP1 check that there are 10 characters in total MP2 if the date is too long/short it will be rejected</p>	2

Question	Answer	Marks												
3(a)	<p>One mark for each correct line.</p> <table border="0" style="width: 100%;"> <thead> <tr> <th style="text-align: left;">Pseudocode statement</th> <th style="text-align: left;">Pseudocode use</th> </tr> </thead> <tbody> <tr> <td style="border: 1px solid black; padding: 5px;">CALL Colour (NewColour)</td> <td style="border: 1px solid black; padding: 5px;">counting</td> </tr> <tr> <td style="border: 1px solid black; padding: 5px;">Value ← (A1 + A2 + A3) / 3</td> <td style="border: 1px solid black; padding: 5px;">finding an average</td> </tr> <tr> <td style="border: 1px solid black; padding: 5px;">Loop1 ← Loop1 + 1</td> <td style="border: 1px solid black; padding: 5px;">totalling</td> </tr> <tr> <td style="border: 1px solid black; padding: 5px;">IF Count > 7 THEN X1 ← 0</td> <td style="border: 1px solid black; padding: 5px;">using a conditional statement</td> </tr> <tr> <td></td> <td style="border: 1px solid black; padding: 5px;">using a procedure</td> </tr> </tbody> </table>	Pseudocode statement	Pseudocode use	CALL Colour (NewColour)	counting	Value ← (A1 + A2 + A3) / 3	finding an average	Loop1 ← Loop1 + 1	totalling	IF Count > 7 THEN X1 ← 0	using a conditional statement		using a procedure	4
Pseudocode statement	Pseudocode use													
CALL Colour (NewColour)	counting													
Value ← (A1 + A2 + A3) / 3	finding an average													
Loop1 ← Loop1 + 1	totalling													
IF Count > 7 THEN X1 ← 0	using a conditional statement													
	using a procedure													

Question	Answer	Marks
3(b)	<p>One mark per mark point, max four</p> <p>MP1 initialise a variable to store the lowest number set to a high value (at least 100) / first value in the array</p> <p>MP2 loop structure to iterate 25 times</p> <p>MP3 use of IF to check if the array element is less than the current lowest value</p> <p>MP4 ...if it is, set this to the lowest value</p> <p>MP5 output the result (with an appropriate message) after the loop</p> <p>Example answer:</p> <pre> Min ← 100 FOR Count ← 1 TO 25 IF Temperatures[Count] < Min THEN Min ← Temperatures[Count] ENDIF NEXT Count OUTPUT "The lowest temperature is ", Min </pre>	4

Question	Answer	Marks
4(a)	<p>One mark per mark point, max four</p> <p>MP1 Line 01 / DECLARE City ARRAY[1:50, 1:2] OF BOOLEAN should be DECLARE City : ARRAY[1:50, 1:2] OF STRING Line 05 / IF should be REPEAT</p> <p>MP2 Line 07 / INPUT City[Count, 2] should be INPUT City[Count, 1]</p> <p>MP3 Line 11 / UNTIL Count = 50 // Line 04 / Count ← 1 AND Line 10 / Count ← Count + 1 should be UNTIL Count = 51 / UNTIL Count > 50 // Line 04 / Count ← 0 AND move Line 10 to beginning of loop / Line 06</p> <p>MP4 Line 12 / FOR Out ← 1 TO 1 should be FOR Out ← 1 TO 50</p> <p>Correct algorithm:</p> <pre> 01 DECLARE City : ARRAY[1:50, 1:2] OF STRING 02 DECLARE Count : INTEGER 03 DECLARE Out : INTEGER 04 Count ← 1 05 REPEAT 06 OUTPUT "Enter the name of the city" 07 INPUT City[Count, 1] 08 OUTPUT "Enter the name of the country" 09 INPUT City[Count, 2] 10 Count ← Count + 1 11 UNTIL Count > 50 12 FOR Out ← 1 TO 50 13 OUTPUT "The city ", City[Out, 1], " is in ", City[Out, 2] 14 NEXT Out </pre>	4

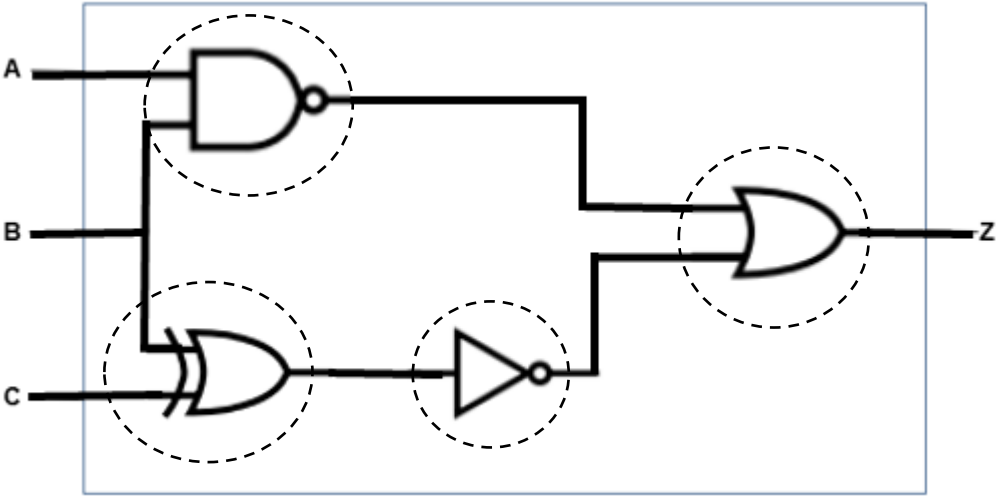

Question	Answer	Marks
4(b)	<p>One mark per mark point, max five</p> <p>MP1 add an input (and prompt to ask) for the country to be searched</p> <p>MP2 ...between lines 11 and 12</p> <p>MP3 ...using a new variable for the input</p> <p>MP4 Add an <code>IF</code> statement to check if the current <code>Country</code> array element matches the country being searched</p> <p>MP5 ...between lines 12 and 13</p> <p>MP6 ...if it does, allow the output in line 13 // the output in line 13 should be after a <code>THEN</code></p> <p>MP7 If it does not, check the next element.</p>	5

Question	Answer	Marks
5	<p>One mark per mark point, max three</p> <p>MP1 variables and constants should have meaningful identifiers</p> <p>MP2 ...so that programmers/future programmers are able to understand their purpose</p> <p>MP3 they are both used for data storage</p> <p>MP4 constants store values that never change during the execution of a program // by example</p> <p>MP5 variables contain values that have been calculated within the program / can change during the execution of the program // by example</p>	3

Question	Answer	Marks																																																																																															
6(a)	<p>One mark per correct column, max five</p> <table border="1" data-bbox="373 315 1257 1552"> <thead> <tr> <th>Value</th> <th>Average</th> <th>Total</th> <th>Count</th> <th>OUTPUT</th> </tr> </thead> <tbody> <tr> <td></td> <td></td> <td>0</td> <td>0</td> <td></td> </tr> <tr> <td>25</td> <td></td> <td>25</td> <td>1</td> <td></td> </tr> <tr> <td>35</td> <td></td> <td>60</td> <td>2</td> <td></td> </tr> <tr> <td>3</td> <td></td> <td>63</td> <td>3</td> <td></td> </tr> <tr> <td>0</td> <td>21</td> <td></td> <td></td> <td>Total is 63</td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td>Average is 21</td> </tr> <tr> <td></td> <td></td> <td>0</td> <td>0</td> <td></td> </tr> <tr> <td>57</td> <td></td> <td>57</td> <td>1</td> <td></td> </tr> <tr> <td>20</td> <td></td> <td>77</td> <td>2</td> <td></td> </tr> <tr> <td>25</td> <td></td> <td>102</td> <td>3</td> <td></td> </tr> <tr> <td>18</td> <td></td> <td>120</td> <td>4</td> <td></td> </tr> <tr> <td>0</td> <td>30</td> <td></td> <td></td> <td>Total is 120</td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td>Average is 30</td> </tr> <tr> <td></td> <td></td> <td>0</td> <td>0</td> <td></td> </tr> <tr> <td>-1</td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> </tbody> </table>	Value	Average	Total	Count	OUTPUT			0	0		25		25	1		35		60	2		3		63	3		0	21			Total is 63					Average is 21			0	0		57		57	1		20		77	2		25		102	3		18		120	4		0	30			Total is 120					Average is 30			0	0		-1																				5
